

Project Setup Guide (For Your Sir)

To run the **DocuFlow AI** project on your machine, please follow these steps:

1. Clone the Repository

```
git clone  
cd aidocumentation
```

2. Install Dependencies

Run this in the root folder:

```
npm install  
cd client && npm install  
cd ..
```

3. Environment Configuration

- Create a new file named **.env** in the root directory. - Copy the contents from **.env.example** into your new **.env**. - **Important**: Ensure the **MONGODB_URI** matches the cloud link provided so we can share the same data.

4. Run the Application

Start both the backend and frontend simultaneously:

```
npm run dev:all
```

- **Backend**: Running on **http://localhost:5000** - **Frontend**: Running on **http://localhost:5173**
